

MODEL 13 DOWNRIGGER COUNTER

What is a downrigger?

Downriggers were created to allow fishermen to troll their lures at a specific depth. A moving bait or lure in the water trolled at the depth where fish were present is the best way to ensure a hookup and get results.

How do downriggers work?

Downrigger counters are used to track the depth at which fishing is optimal. Downrigger counters enable a fisherman to record the depth at which they caught a fish, and return to that depth after reeling in the catch.
