

Water/Waste Water Industry - Hour Maintenance Meters

In today's eco-friendly world, this rapidly growing market will continue to expand for many years to come. There are two key target suppliers to this industry: the Electrical Controls Systems Builder (Panel Shop) and the Original Equipment Manufacturer (OEM). Control components for the Water/Waste Water Industry can vary from PLC's, HIM's, and industrial computers to simple Hour Meters for single function monitoring. Electromechanical counters are also used to count pump cycles.

Hour Meters are commonly used because of their low cost, simplicity, and their ability to free up I/O from more complex control devices. They are used to monitor "running hours" of the pumps or alert the user when to change or perform other maintenance functions.
